

Press Release

Enzymatica and STADA sign partnership agreement for Germany and Austria

- New partnership agreement covers the launch and distribution of Enzymatica's ColdZyme® oral-spray technology in Germany and Austria
- Alliance combines Enzymatica's clinically documented medical device with STADA's comprehensive commercial platform
- STADA will from the 2026/2027 colds and flu season market the product under its own brand names

Lund, Sweden/Bad Vilbel, Germany – 1 April 2026 – Enzymatica AB (publ) and STADA Arzneimittel AG have entered into a partnership agreement regarding the launch and distribution of Enzymatica's ColdZyme® oral-spray technology in Germany and Austria. The commercial impact is expected to be realized progressively starting from the 2026-2027 colds and flu season.

The new agreement builds on prior experience and collaboration between the two companies in Germany and Austria, and combines Enzymatica's clinically documented medical device with STADA's comprehensive commercial platform.

Strong commercial platform for long-term growth

As part of the amended partnership, STADA will conduct a structured, comprehensive launch of the oral spray in Germany and Austria, where the product will be marketed under STADA's own brand names. The initiative will be integrated into STADA's established commercial platform within the group's Consumer Healthcare segment, and will include targeted

Executive Board: Peter Goldschmidt (CEO) / Miguel Pagan Fernandez / Boris Döbler
Chairman of the Supervisory Board: Dr. Günter von Au

activities across both pharmacies and digital channels, with a clear focus on the product's clinical evidence and its unique, differentiated positioning in the category.

As a top-five player in Consumer Healthcare in Europe, STADA holds a leading position in Germany, especially in the cough/cold and respiratory market sector. The group intends to use its extensive pharmacy distribution and salesforce, deep consumer insights and 130-year heritage to establish its brands and create long-term value.

"This is a significant breakthrough for Enzymatica. Germany is the largest and most important cold and flu market in Europe. Entering into a partnership with STADA confirms ColdZyme's competitiveness and commercial relevance. With the right partner in place, we can build long-term and create the conditions for significant volumes over time," says Sana Alajmovic, CEO of Enzymatica.

"We see the ColdZyme medical-device technology as a strong and clinically differentiated addition to our cold and flu portfolio," comments Volker Sydow, STADA's Head of Global Consumer Healthcare. "With our established pharmacy platform and an integrated marketing strategy, we see attractive opportunities to create long-term value for our retail and commercial partners in the German and Austrian markets."

Gradual scale-up with commercial impact from 2027

Calendar year 2026 will be characterized by preparations, marketing activities, and initial deliveries into Germany and Austria. The more substantial commercial impact is expected to be realized progressively from the 2026-2027 colds and flu season, when the initiative will be fully integrated into STADA's Consumer Healthcare marketing and campaign structure.

About ColdZyme®

ColdZyme® is a medical device product in the form of an oral spray used for colds and cold-like symptoms. The product is applied in the mouth and throat—where many respiratory viruses first establish themselves. ColdZyme® is based on a unique barrier technology that forms a protective layer in the throat. This layer captures viruses and inhibits their ability to infect cells and spread. By acting early in the course of infection, ColdZyme® may help shorten the duration of a cold and significantly reduce symptom severity.

The effect of ColdZyme® has been demonstrated in clinical studies that show significant improvements in both symptom duration and intensity in colds. ColdZyme® is a medical device certified under the EU Medical Device Regulation (MDR, Class III), meaning it meets high standards for safety, quality, and clinical documentation.
